and Chemicals & Fertilizers**

**Govt of India**

\*Invited

There have been many achievements in improving access to health care, however much more still needs to be done in terms of quality of care, making services available to all rural areas and ensuring better health outcomes. The government will aim to reduce inequalities in our health system, improve quality of care and public facilities, and boost our human resources and step up the fight against HIV-AIDS and other diseases. Health reforms will involve mobilisation of available resources in both private and public health sectors to ensure improved health outcomes for all Indians.

Health is a fundamental human right and a global social goal. It is pertinent for the realization of basic human needs and for a better quality of life.

Health is a causative factor that affects country's aggregate level of economic growth. Since development is a consequence of good health, even the poorest developing countries should make it a priority to invest in the health sector. Unfortunately, health has been poorly invested in by countries with low human development, and the health sector still remains largely untapped and continues to suffer neglect.

Another factor is innovation which is often seen as one of a driving force for a sustainable long-term economic growth of any country. Innovation includes both production of innovative goods and services, and the innovative process of producing goods and services. Indian economy is one of the fastest growing economies in this modern globalization world. Indian economy is enjoying the average economic growth of 7% from last two decades but is this economic growth sustainable or only some short-term phenomena because of increasing consumer market and increasing information sector. To achieve long-term sustainable growth Innovation is very important.

### Aims and objectives

1. Revisit the notion of transformation to enhance its' focus from issues of healthcare service, management and access to communities and quality in relation to the core functions of healthcare;
2. Examine the role of health in provincial development agenda;
3. Identify and prioritise key objectives for the healthcare system in the short (1 to 2 years), medium (3-5 years) and long term (5-10 years) and;
4. Discuss the need, feasibility and possible modalities for more systematic and structured communication between the sector
5. To identify and utilise the new innovations & technological interventions in R & D
6. To discuss the regulatory challenges of Medical Device Rule 2017 and the need to end to end medical device regulations in our country
7. Addressing current concerns of Indian pharma industry, where cost of RM, PM etc going up, which needs corresponding increase in MRPs
